

QR - Quick Response to New Profits/Revenue for Members

Instead of Just Printing QR Codes, Monetize Them for Your Business!

Create new revenue streams, up-sell, build stronger client relationships...

SmartViso is an online Mobile Website Creator and QR Code Management Platform that creates robust, optimized, finger-friendly mobile websites that can capture leads, showcase products, drive social media and so much more. Instead of just printing QR codes, monetize them for your business! Go beyond QR codes to desktop websites & FaceBook pages and bring print to life!

Below are just a few examples...

Business Cards Scan an employee business card with QR code printed on back to view a unique employee mobile optimized page with one touch communication functionality. Then connect to the rest of the organizations content like corporate videos, newsletter sign up form and social media initiatives.

Direct Mail Scan a direct mail piece with a QR code and provide an engaging call to action like receiving a mobile coupon or completing an application or lead form. In addition, provide users with company location mapping, hours of operation and display products and services in a mobile optimized catalog.

Real Estate Property Signage... Scan property signage with printed QR code to view specific property information with one touch call and email to property agent. Then connect to the rest of the agents content such as market reports, testimonials and forms to book a market evaluation.
